TRENCHLESS DIRECTIONAL DRILLING

Allied/All city has over 30 years of experience in the underground utilities business. We offer both small and larger powerful drilling rigs so we can tackle any sized installations.

Our expertly trained crew has hundreds of installations under their belt so that your job gets done right the first time. Allied/All-City takes pride and prioritizes the protection and preservation of the environment.

With directional drilling trenchless technology, we will leave your work sites as clean and well preserved as we found them.

Directional drilling leaves a small footprint while installing short runs of pipes & conduits in driveways, landscaping, etc. between 20 to 50 feet and for longer runs of 1000 feet & more for underground utility services or main line conduits ranging from 1-inch to 12-inch & for multiple conduits installed at the same time if needed.

Horizontal directional drilling (HDD) is designed to place conduits and wire underground without trenching or disturbing the ground, landscaping, trees, driveways, road crossings, houses, buildings, patios, parking lots, etc.

Our single most important goal in mind for every project we do is to set the standard for quality service. We are leaders in horizontal directional drilling (HDD) and underground utility markets.

Unlike missiles, horizontal directional drilling is designed with a location system that gives us control of both the depth and direction for the exact placement needed to install the conduits or wire with pinpoint accuracy to the specific target area for every installation.

Conduit materials: PVC or Poly and certified in pipe fusing HDPE pipe.

Electrical installations can include hand holes, mule tape & tracer wire in conduit, electrical cables and wiring for power and communication in conduits.

We have a large amount of equipment, multiple drills, vacuums, excavators, and skid steers to handle all of your underground needs.

KEY BENEFITS OF DIRECTIONAL DRILLING

-  **Steering Capability:** Precise steering to navigate around obstacles and follow a planned path.
-  **Application:** Preferred for longer runs, complex paths, and situations where precise placement is necessary.
-  **Soil Conditions:** Handles a wide range of soil conditions, including rock.
-  **Cost Benefits:** Directional drilling will eliminate the need to replace driveways, patio's, front stoops, trees and landscaping that are typically destroyed when conventional digging is used.
-  **Licensed Master Plumbers:** As a licensed master plumber, we can provide a turn key project from permits to completion.
